NEWS RELEASE

Carolina Process Control Systems, LLC Under New Ownership – Paul Skelton

---

FOR IMMEDIATE RELEASE: ***Forest City, NC*** April 1, 2009: Carolina Process Control Systems, LLC enters into a new era of ownership. Paul Skelton, formerly Vice President of Sales & Operations, recently acquired the company from Paul Fisher, former owner/operator of the company.

Carolina Process Control Systems, LLC specializes in consulting, chemistry sales & distribution, commodity metal sales & distribution, equipment sales & preventive maintenance, as well as turnkey processing systems for the metal finishing industry. Areas of expertise are electroplating, electroless processes including electroless nickel, phosphating, pretreatment for powder coating, black oxide and other immersion processes, design and fabrication of equipment and controls, and consultation of both captive and job shop facilities.

As new owner/operator, Paul Skelton is very motivated and focused in his new role. CPC Systems will concentrate its efforts strengthening its relationships in the Carolinas, as well as the other southeastern states. Paul Skelton stated, "Given the current economic conditions of our nation and how it has directly affected the metal finishing industry in the southeast, my focus will be providing our clients with EXACTLY what they need, and when they need it. We strongly support current manufacturing practices such as LEAN management, going GREEN, VMI (Vendor Managed Inventory) and vertical integration of metal finishing processes. In this current market, the old adage, "a penny saved, is a penny earned" very much applies to the success of this business."
